II. FINDINGS

A. Summary: Check all that apply. At least one box from the following list MUST be selected. Complete the corresponding sections/tables and summarize data sources.

- ☐ The review area is comprised entirely of dry land (i.e., there are no waters or water features, including wetlands, of any kind in the entire review area). Rationale: N/A or describe rationale.
- ☐ There are "navigable waters of the United States" within Rivers and Harbors Act jurisdiction within the review area (complete table in Section II.B).
- ☐ There are "waters of the United States" within Clean Water Act jurisdiction within the review area (complete appropriate tables in Section II.C).
- ☒ There are waters or water features excluded from Clean Water Act jurisdiction within the review area (complete table in Section II.D).

¹ Map(s)/figure(s) are attached to the AJD provided to the requestor.

² If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.

³ A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD Form.

D. Excluded Waters or Features

Excluded waters ((b)(1) – (b)(12)): ⁴				
Exclusion Name	Exclusion Size		Exclusion ⁵	Rationale for Exclusion Determination
Wetland 1	3.17	acre(s)	(b)(1) Non-adjacent wetland.	<p>The wetland is a grassed swale in a shallow depression surrounded by an agricultural field. There is an inlet culvert on the northeast edge of the wetland (upstream of flow) under Bell School Road, but this inlet comes from a road ditch that is not an (a)(1)-(a)(3) water. There is an outlet culvert on the southwest edge of the wetland (downstream of flow) under Honey Creek Road, but this outlet leads to an agricultural field where any surface water flow becomes diffuse overland sheet flow that is not adjacent to or lead to an (a)(1)-(a)(3) water.</p> <p>Based on topographic contours, the only inlets/outlets are from the above mentioned culverts. The wetland would not be flooded by an (a)(1)-(3) water in a typical year. There is not a natural berm, bank, dune, or similar natural feature physically separating the wetland from a paragraph (a)(1)-(3) water. It is not physically separated from a paragraph (a)(1)-(3) by an artificial dike, barrier, or similar artificial structure.</p>

III. SUPPORTING INFORMATION

☒ USDA NRCS Soil Survey: [Walworth County](#)

☐ USFWS NWI maps: [Title\(s\) and/or date\(s\)](#).

☒ USGS topographic maps: [5 ft contours, Walworth County](#)

⁴ Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.

⁵ Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.
